

NX Mold Connect

Save time and reduce cost during tool design through efficient supplier collaborations

Overview

NX Mold Connect is a Siemens Digital Industries Software application which streamlines the request for quote (RFQ) and bidding process for manufacturers of injection molded parts. The app runs in the cloud using Siemens Xcelerator, enabling fast access from anywhere.

Existing NX desktop users can seamlessly share designs and data between NX and NX Mold Connect allowing your team, partners, and tooling vendors to view and validate parts.

Browser-based interface

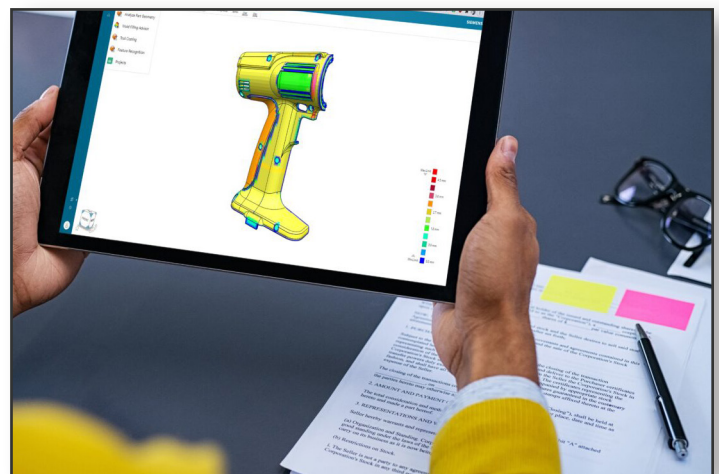

NX Mold Connect uses Xcelerator Cloud SaaS technology to view and share part designs over a safe and secure connection. The intuitive app, accessible in your browser on any device, allows your team to provide collaborative design feedback.

Part validation

Geometry can be uploaded to the project and sections views created in the early stages of product development. Plastic part analysis within the app allows your suppliers to validate the design for manufacturability and ensure quality.

Benefits

- Browser-based interface to view, mark-up and share files
- Validate part designs in early stages of product development
- Automated feature recognition for ribs, undercuts and openings
- Instant collaboration for fast quoting
- Better quality production parts due to early supplier involvement
- Out-of-the-box and custom quotation template capabilities

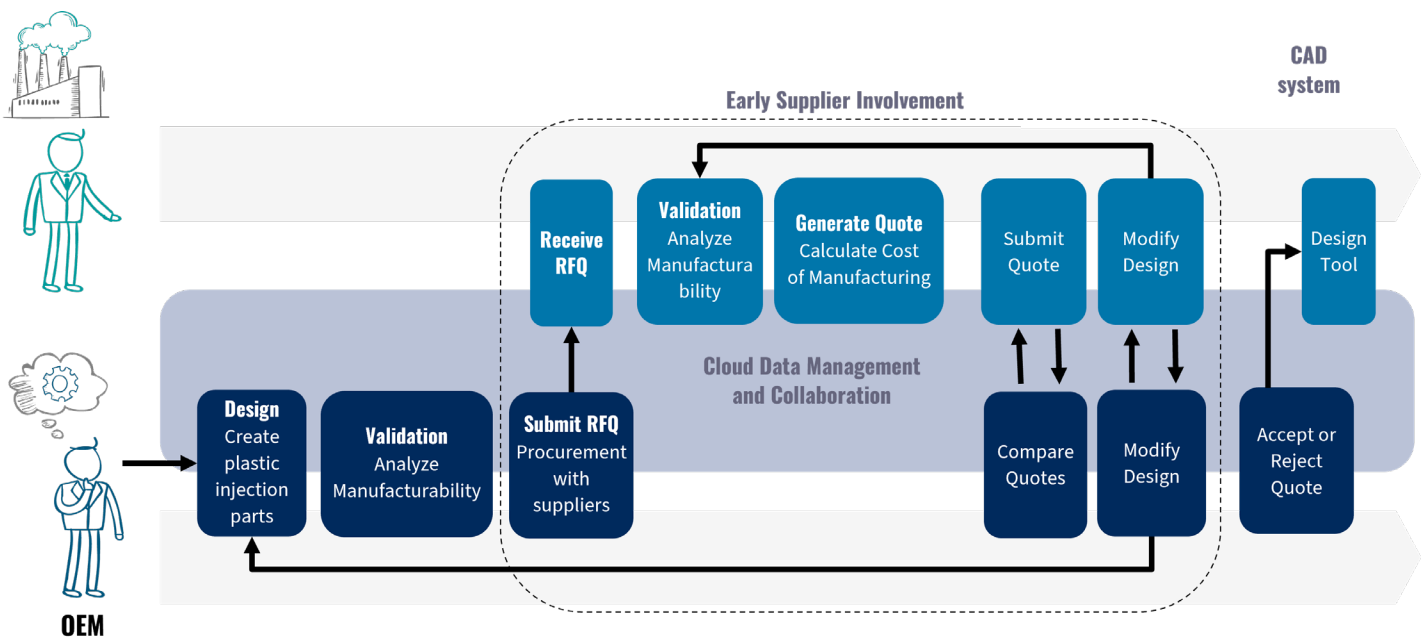

Request for Quote (RFQ) workflows

Tooling costs can be quickly estimated using automated feature recognition. Accurate quotes are generated by specifying other cost parameters. Suppliers can upload quotes and related documents to the project and automatically notify the manufacturer, speeding up the RFQ process.

New streamlined RFQ workflows include:

- Send RFQ to external suppliers
- Collaborate with multiple suppliers per RFQ
- Improved RFQ statuses and notification emails
- Project data view and download access control
